What we need to change:

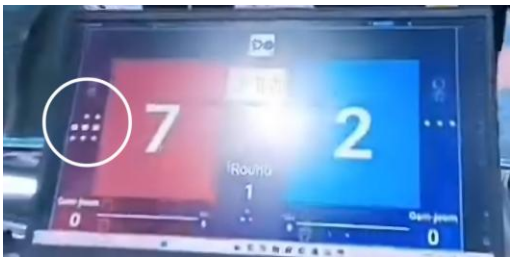

1. Abb shortcuts for timer ON/OFF in keyboard
2. Make a corner referee button history

Like this image

How it works:

When corner referees press their joystick buttons to award a point to a competitor, and a majority agreement is reached, the point is added to the display. The number of referees who pressed the button is indicated by dots next to the awarded competitor—for instance, four dots appear if four referees pressed the button, and three dots appear if three referees did. These dots are displayed vertically, stacked one below the other in a column. If they press the button for head kick then make a dot if the point is for chest kick make a box like the image on the bottom

When the place is full and there is no place for another row then delete the first dot row to place that row after that delete the second dot row for another one and place the rows like this .

Make a history of it on the settings option called corner referee history on this option show in what time how press what button and delete the history after the match ends and winner decided

3.make the pointes (+2,+3,+1,etc) on the main scoreboard hide when the timer is on when the timer is pause make then appear

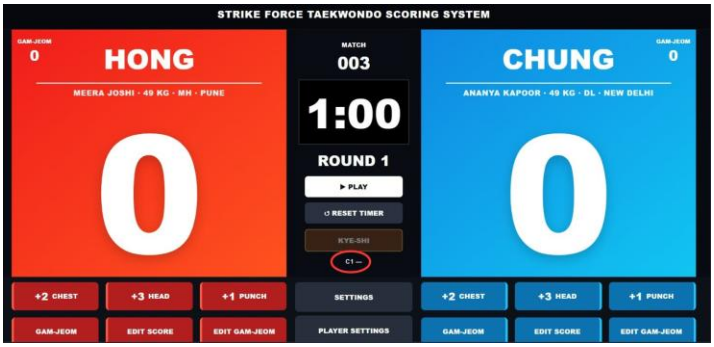

4.make the pointes on the scoreboard editable when the timer is pause but corner referees cannot give points when the Timer is paused

5.add an advance kick point count on the window in the break time where it shows how many +3, +2, +1 and gam-jeom of both players

6.add a screen saver shortcut for keyboard and add a screen sever that contains "SFTS" logo

7. Add an editable 'Arena No.' field along the top side of the scoreboard to display the current arena number.

8.

Make the C1, C2, C3, C4 show instantly which corner referee press what button

9.make the match counter reset to zero when the system shutdown

10. In the event of an unexpected shutdown, all records and scores are preserved and will be restored once the system restarts. The system will reset only when it is shut down properly via the shutdown menu

11.make the gam-jeom counter on both side a bit large front then the present one to clearly see it while fighting

12.make the system decide 1st, 2nd ,3rd and second 3rd after every match is done in that weight category list and add the 1st, 2nd, 3rd on the result list

13. On the announcement also tell how is chung and how is hong like-
(**name chung blue chest guard VS name hong red chest guard contestant get ready**)

14.
